Spec-to-Report

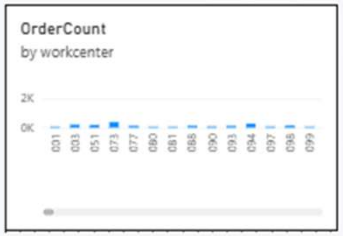

Blah, blah ...
The user wants a report to visualize X as the function of Y, aggregated by Z
This can be built using data sources X, Y, Z – here's the proof...
@dataclass
class DashboardSpec:
name: str
entities: list[str]
columns: dict[str, list[str]]
grain: dict[str, str]
relationships: list[Relationship]
measures: list[Measure]
pages: list[Page]
